

Epolin Products and Development are focused on the **200nm to 3000nm** range of the spectrum

Product Development Path

- 1-Epolin will computer model a matching solution on a Teams or Zoom call with the customer.
- 2-Once we agree on the modeled solution, we will issue a quote for an Engineering trial of the product.
- 3-With an order we will start production of a sample for evaluation
- 4-Epolin produces dyes through Chemical Synthesis
- 5-Combined they make an Epolight dye blend or formulation
- 6-The dye and thermoplastic pellet can be compound extruded.
- 7-Ready to mold pellet available as an Epolin Luminate
- 8-Customer injection molds the pellet and Epolin can help with Analysis
